Title: <u>Multiply</u>

Q1

Write a recursive program, RecurMulti that computes the multiplication of two numbers. For example, 7 multiply by 4 equals 28.

```java
public class RecurMulti {

        public static void main(String[] args)
        {

            System.out.println(multiply(4,7));

        }

    }
```

Test case:

```java
System.out.println(multiply(4,7));
System.out.println(multiply(0,7));
System.out.println(multiply(4,0));
```
